

PEOPLE ACTION CHECK

CLOUD CONNECTION VERIFIED

Private Slack guidance for documented people-management actions

HOW A CHECK MOVES

1 Choose

Select from 10 situations and read the relevant guidance.

2 Assess

Answer five questions per situation; add notes and evidence.

3 Review

See Low, Medium or High risk and suggested next steps.

4 Submit to HR

Share the case for HR review, documentation and reporting.

WHAT MANAGERS & HR CAN DO

Managers save and resume private checks, add documentation, request Word reports and submit to HR.

HR reviews full submitted cases, downloads reports, adds documents and uses the Governance Center.

HOW IT RUNS & WHO GOVERNS

Slack

Cloudflare

Supabase

Cloudflare hosts the app; Supabase stores records. Slack stores messages and uploaded files.

PRIVATE BY DESIGN

Private drafts; HR reviews submitted case details. Access, retention and audit controls are built in. No generative AI. Wider rollout still needs access, recovery and delivery checks.

A private workflow for managers

Assess the situation, keep the factual record, and choose when to share

Assess and document

Choose one or more situations. Read examples and documentation guidance.

Answer five questions per situation with Yes, No or Don't know. Add notes, links and Slack files.

Save, review and continue

Save a partial check and resume from My history. Review recorded answers and suggested next steps.

Request a Word report or set a follow-up date. Dates are visible; reminders are not automatically sent.

HR reviews explicitly shared cases

Case details, supporting documents, HR review and downloadable reports

Confirm sharing

The manager sees the recipients and disclosure before submitting.

Review the case

HR sees answers, notes, risk guidance and supporting documents; download Word reports to their private app DM.

Record a response

HR adds documents, review notes and status; the manager receives a private update.

HR manages the policy library and Governance Center. Submitted answers are preserved while HR review details can be updated.

Risk guidance supports human decisions

Responses produce a rule-based assessment, not an employment decision

Use the guidance

Review the suggested steps and keep documentation current.

Resolve the gaps

Review uncertainty and documentation; consult HR as appropriate.

Stop for review

The app directs HR and, when appropriate, legal review before action.

Critical risk or an unknown critical response can force High risk. The app has no generative AI and does not rate employee performance.

Privacy and governance in the workflow

Share deliberately and keep access limited to the people who need it

Governance Center is built

HR sees control status, authorized reviewer count, retention settings and record counts.

Recent audit activity shows governed actions and who performed them.

HR access controls protect review and policy changes.

Privacy and record controls

Private drafts have owner access checks.

Retention is configurable; Slack files follow workspace controls.

Deleting a personal check preserves the submitted HR case and delivered reports.

The app now runs in the cloud

Slack is the interface; the app no longer depends on a Mac process

Slack

Forms, buttons, private notifications

Cloudflare

Online app, routing and protected settings

Supabase

Checks, shared snapshots, policies and audit records

What “backed up” means

App code and text documentation are saved in GitHub. That is separate from employee-data backup: cloud backup and restore still need verification.

What was actually checked

Live connection recovery plus automated workflow tests

Observed live in Slack

History and a saved assessment opened.

Policy library and HR queue opened.

The new-check entry screen opened.

Cloud storage health returned OK.

Automated evidence

31

passing tests

81

Slack payload checks

External Slack responses are simulated in the tests. Cloud build also passed.

Before a wider rollout

Keep the working pilot and finish the operational checks

Verify reliability

- Test separate manager and HR accounts
- Check simultaneous edits in cloud storage
- Exercise failed deliveries and retry
- Verify a cloud backup and restore

Confirm rollout settings

- Confirm HR content and access owners
- Confirm agreed retention settings
- Assign monitoring, recovery and support
- Check mobile and accessible layouts
